

Quotium Technologies is a specialist in the development of innovative software solutions to guarantee the security and performance of business-critical applications throughout their lifecycle.

Quotium considers that business applications are an important company asset. Applications are often a great asset and an essential differentiator in highly competitive environments while they also require significant investments to develop and put into place.

Business applications are the visible manifestation of an information system. Their quality and functionality directly impact on the productivity of users and on the satisfaction of the company's clients. Some application chains become viewed as critical once their availability has an influence on the revenue and profitability of the firm.

Today, most of applications use a web interfaces and open information systems up to external attack. As a result the principal vulnerability of information systems is now found at this application layer.

Quotium's solutions offer developers and quality assurance teams the possibility to produce secure and high performance applications. These solutions give also technical staff the ability to manage the functionality of in-production applications in real-time, and to assure that SLA commitments are met.

Quotium similarly develops software capable of integrity and longevity of stored data, another critical asset of contemporary business.

Quotium spends 40% of its revenue on R&D both directly and through international partnerships.

Quotium is listed on the NYSE Euronext exchange.

Headline Solutions and Products

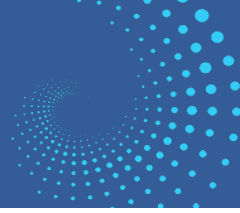

- Web application security - **Seeker**
- Load testing and application performance - **Qtest**
- Performance and availability of operational applications - **AppliManager**
- Longevity of data on tape - **StorSentry**

Quotium's Principal Objectives

Quotium's mission is to ensure that clients' applications run properly in test, pre-production, and in production phases.

Quotium Technologies develops its solutions with three principal objectives.

- Provide excellent software which, thanks to its highly technical and innovative character, can respond to the most advanced needs of users.
- Propose solutions which are simple and speedy to implement
- Allows effective cost control and a rapid return on investment

Solutions to secure and manage your critical applications

Business critical applications are important strategic company assets. The availability and the performance of their functions has a direct influence on the productivity and performance of your company. Over the last several years, applications and web interfaces have multiplied in number. They considerably increase the vulnerability of your information systems by exposing them to ever more frequent attack.

These corporate problems are of relevance to development, quality control, production, and security professionals. It is thus imperative to find solutions that respond to the whole development lifecycle of these applications. These solutions must also be able to be put into place speedily, easily usable by your teams, and must respond directly and effectively to all the problems noted.

Quotium Technologies is specialised in the development of innovative solutions to assure the security and functionality of these business applications across their lifecycle.
